

---

# FLIP LANG

---

## INSTALLATION

Unzip the file.

Send the flip-lang directory right into your wordpress plugin directory via FTP :

**[your-wordpress-install-dir]/wp-content/plugins/**

## SET UP

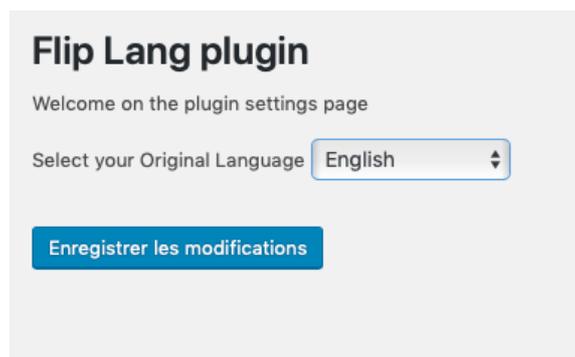

Once the files are in place, go into your wordpress admin area, and click on **Plugins**.

Then scroll until you see **Flip Lang**, and click **Activate**.

Once the plug in is activated, you'll see on the left bar menu in your admin panel the **Flip Lang** menu, click on it.

You'll arrive on the Flip lang plugin page. Just choose your main language that you use on your blog in the list, and click **Save**.

It'll set your **Original Language**.

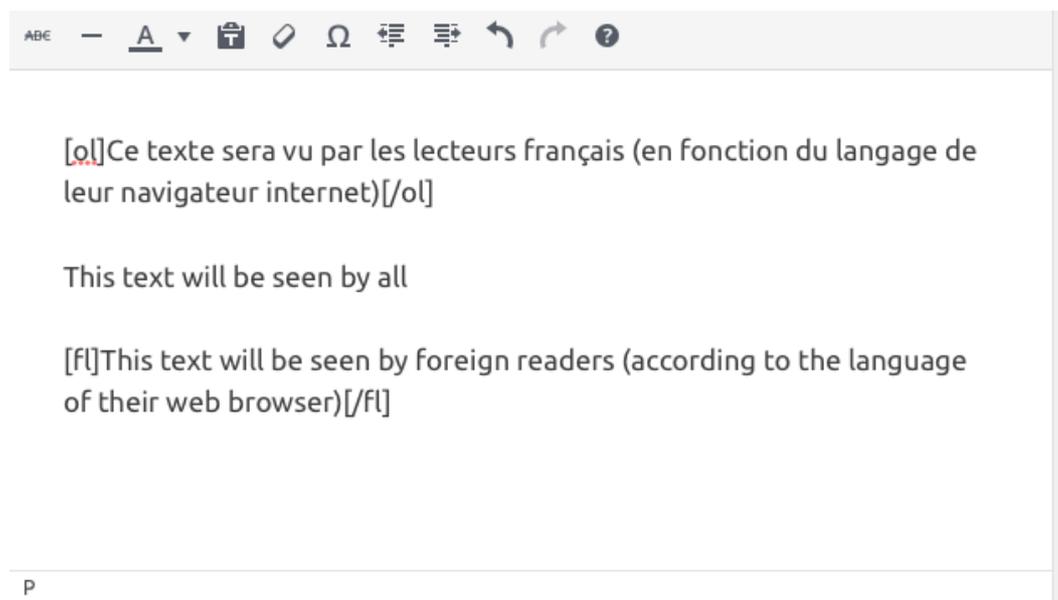

## USAGE

When you write your post in your original language, put it between the shortcode [ol] [/ol] (for **O**riginal **L**anguage).

Then after it, in the same post write it too in the other language (the **F**oreign **L**anguage) between the shortcode [fl] [/fl].

By doing so, if you're italian and wrote your post in Italian between the [ol] brackets, and in english in the [fl] brackets; the italian readers will have on screen only the post contained in the [ol] brackets.

And when other readers (like Sweden ones for example) read your post, they'll only see the post contained in the [fl] brackets ( the english post)

The screenshot shows a text editor interface with a toolbar at the top containing icons for undo, redo, bold, italic, underline, link, unlink, list, and help. Below the toolbar, the text editor contains the following content:

[ol]Ce texte sera vu par les lecteurs français (en fonction du langage de leur navigateur internet)/[ol]

This text will be seen by all

[fl]This text will be seen by foreign readers (according to the language of their web browser)/[fl]
